March 24, 1969

TO Antrim Planning Board
FROM Robert A. Caughey, Water Street
SUBJECT: Fire Protection

In the interest of fire protection for areas outside the Precinct, consideration should be given to the installation of dry hydrants in the following locations:

1. The foot of Brooks Hill, either at the proposed new bridge site or the waterfalls, so called;
2. Repair and modify dry hydrant at Clinton;
3. At North Branch, by the bridge by the chapel;
4. At Cochrane Brook;
5. Two at Gregg Lake,
 - a. Near the Hog Back
 - b. Near the dam; and,
6. At Pierce Lake

Consideration of these installations should involve the following factors:

1. Most important is instant availability of water in case of a fire in any season of the year, and elimination of the problem of proper placement of suction, cutting holes in the ice, etc.;
2. Cost and servicing of dry hydrants is low; and,
3. Availability of water sources, either ponds, streams or water holes, are adequate for the proposed locations.
