We had a discussion and I sent them the CMR. Basically, their limiting factor is the CCC well, not the School well. What they propose is within the Zone 1 of the CCC well, and I already had to work to convince the State not to make the School move the garden. So we're going to be conservative about any other activities within the zone I.

Given the public water well, what concerns or restrictions will the Field Fund have to contend with if they want to fertilize the CCC fields?

Tim

Subject: The Field Fund

Hi Tim, I am writing in support of the work The Field Fund, Inc is planning to do on the fields here in Chilmark. It seems that their efforts will improve the playing conditions for our students and for the community, at no additional cost to the school. The Chilmark School welcomes the basic maintenance support this fall (aeration, overseeding) from The Field Fund, Inc, and understands that this maintenance is supplemental, (mowing not included) , and will not

interfere with the use of the fields by the students or community members. I did meet and speak with the members of The Field Fund last week when their turf grass expert, Jerad Minnick, came by to assess the field. I am grateful that they are offering to help rejuvenate the Chilmark playing field. If you have any questions, or concerns please contact me.

Susan Stevens
Head of School
Chilmark School
