October 5, 2012

SPRUCE HOLE AQUIFER

The Town of Durham has developed a new Groundwater Supply Well within the Spruce Hole Aquifer that is capable of yielding up to up to 63 million gallons per year.

This well (Production Well #2) is located in Lee, just west of the Lee-Durham line, east of Packers Falls Rd.

The groundwater development firm Emery & Garrett Groundwater, Inc. will provide a presentation at the Selectmen's meeting on **October 15, 2012** on the status of the Spruce Hole Municipal Well and Artificial Recharge Project.

Residents, particularly in the area of Packers Falls Road, Jenkins Rd and Wednesday Hill Rd who are concerned about the possibility of an impact to their well may wish to attend this informational meeting.

6:00 pm at the Public Safety Complex.
