

The **Board of Finance** held a regular meeting on Monday, January 25, 2010 in the Council Chamber, Newtown Municipal Center, 3 Primrose Street, Newtown, CT. John Kortze called the meeting to order at 7:35 p.m.

**PRESENT:** John Kortze, James Gaston, Marty Gersten, Joseph Kearney, Harry Waterbury and Michael Portnoy

**ALSO PRESENT:** Finance Director Robert Tait, Economic Development Director Elizabeth Stocker, Board of Education members Lillian Bittman, Kathy Fetchick, Bill Hart, Richard Gaines, Debbie Leidlein and Chris Lagana, Superintendent Dr. Janet Robinson and Director of Facilities Gino Faiella, twelve members of the public and two members of the press.

**VOTER COMMENTS:** **Deborra Zukowski, 4 Cornfield Ridge Road** stated the last meeting was exceptional and all parties should be commended. She is concerned with the tone of the meetings saying the tone does not lend itself to the kind of constructive dialogue that we want going forward. Numbers without context is not a constructive way to move forward.

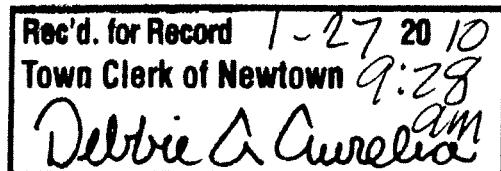

**Bob Merola, 22 Ashford Lane** said all the schools that were a concern should've been tested for carbon dioxide. One data point doesn't give anything to compare to and encourages more complete data.

**COMMUNICATIONS:** Mr. Kortze noted there were two reports on carbon dioxide and further discussion will take place.

**ACCEPTANCE OF MINUTES:** Mr. Gaston moved to accept the meeting minutes of January 11, 2010. Mr. Gersten seconded. Mr. Portnoy noted that in the Finance Director Report it should be mentioned that the bond anticipation notes spoken of were in reference to the High School financing. Also, Mr. Portnoy clarified that he was asking why would we use bond anticipation notes for two years for the high school financing when we can do it now and lock in very low interest rates. All were in favor of accepting the minutes as amended.

**FIRST SELECTMAN REPORT:** First Selectman Llodra reported there will be a Special Town Meeting on January 28 at 6:30 in the Senior Center to act on the special appropriation and the refunding of the bond for \$3.5 million. First Selectman Llodra explained the budget meetings are set for Jan. 26, Jan. 28 and Feb. 1 and will be addressed as document review and budget detail. Appropriate modifications have been made and identified in budget documents to the Selectman.

Mr. Kortze stated all Board of Finance budget meetings will be held at the Municipal Building with the exception of March 4, which may be held at the High School. The entire budget calendar is posted on the town website.

**FINANCE DIRECTOR REPORT:** none noted.

**OLD BUSINESS:**

**Discussion and possible action:**

**1. Board of Education CIP:** Mrs. Bittman addressed the air quality issues saying Mark Granville from Brooks Environmental has conducted spot tests at the Middle School. The board will continue research to get more information before moving forward. The exhaust fans have not been running on the roof of the Middle School, Mr. Faiella is reconfiguring the computer so the fans will run during the school day. Energy costs will increase but the air will be better circulated. The facilities subcommittee will continue to test all the schools. Mr. Gaston stated carbon dioxide is not a health hazard but noted the temperatures at Hawley School are high making it difficult to teach or learn. Mark Granville explained that levels change based on occupancy and activity. OSHA standards were developed for work place environments for healthy employee's who were working with carbon dioxide. Ms. Bittman stated the board would be looking at levels, what is safe and what is not. Mr. Kortze asked about the problematic boiler at Hawley School. Mr. Gaston thinks Hawley School is as problematic as the Middle School.

Kathy Fetchick presented the CIP (Att. A) focusing on the Middle School roof and the Hawley HVAC project. It was explained that in order to get reimbursement from the State of CT the town would have to get a schematic roof design. The Hawley project has been broken down into heating, ventilation and air conditioning. The bigger projects will be broken down so the most important issues can be taken care of. Mr. Faiella discussed the boilers. Ms. Fetchick noted that the entire project couldn't be done at one time without displacing the students. Ms. Fetchick expects changes in priorities once all detailed projects and data from all schools have been reviewed. Ms. Bittman hopes there will be a better understanding once the facilities committee has finished their work. Mr. Kearney asked with the uncertainty of projects in year four should we be approving it now.

Mr. Tait handed out a combined Board of Selectman and Board of Education CIP (Att. B) figured at a 3.5% budget increase. Mr. Gaston asked for a chart at 4.2%. First Selectman Llodra noted that future projects will most likely include the cost for a new police station and a new senior center.

**NEW BUSINESS:**

**Discussion and possible action:**

**Discussion with consultant from Webster Bank, Barry Bernube:** Mr. Bernube stated the Town will be looking for the opinion of Standard and Poors rating agency. Mr. Bernube is optimistic the town will receive a strong rating from S&P. Newtown has a fund balance, a formal debt service policy and spends a lot of time on the CIP. Mr. Bernube doesn't think the pension and OPEB liability will be a negative for the town. His concerns are that the grand list of 10-1-08 went down and the use of fund

Board of Finance  
January 25, 2010

balance. The town should not use the fund balance to balance the budget. Mr. Tait said the 10-1-09 grand list has gone up and explained that the use of fund balance has been reduced over the years. Typically communities do a BAN issue first and then bond. The town has addressed shortfall in state aid by doing a mid year budget amendment. A formal policy is not necessary. Bonding everything now will have a huge budgetary impact.

Elizabeth Stocker presented a commercial development update saying there is a plan in place for marketing the town to attract businesses to occupy existing real estate available. Projects are doing well in terms of continuing occupancy and vacancy rates have not been high.

**Special Appropriation:** Mr. Gaston moved the special appropriation of \$45,000 to be financed by funds in capital and non-recurring fund (fund #44) which represent approximately 20% of the schematic design fee which would enable the town to obtain a reasonable cost estimate for the proposed middle school roof replacement project. Mr. Gersten seconded. All in favor. Reimbursement requires an engineering study.

**ANNOUNCEMENTS:** none

**ADJOURNMENT:**

Having no further business, the Board of Finance adjourned their regular meeting at 10:10 p.m.

Respectfully Submitted,

Susan Marcinek  
Susan Marcinek

Item # 1 - Continued

**ITEM/PROJECT DESCRIPTION:**

-----CONTINUED-----

Newtown Middle School Sloped Roof Replacement

Project includes stripping of all existing roofing on sloped section of roof; repair and replacement of damaged sheathing or structure and replace with 40 year architectural fiberglass shingle per manufacturer's specifications.

**PURPOSE & JUSTIFICATION:**

-----CONTINUED-----

Middle School Sloped roof Replacement

The purpose of this project is to replace a failing and worn roof system that is over 30 years old. Shingles are very worn and beginning to leak in the front valleys. This roof section has exceeded it's life cycle.

Newtown Middle School - Flat Roof Replacement

The project includes:

Stripping of all existing pvc roofing and insulation materials

Redesign of all roof decks to meet 1/2" roof pitch code

Raising all roof equipment, curbs, and drains as needed to meet roof pitch change

Include a secondary roof drainage system to meet new State of Connecticut roof code requirements

**PURPOSE & JUSTIFICATION:**

-----CONTINUED-----

Newtown Middle School Flat Roof Replacement

The purpose of this project is to replace a failing roof system. The existing roof was installed in 1986 exceeding the twenty year replacement requirement to apply for State of Connecticut reimbursement.

In addition, this roof has required extensive maintenance and repair funds to address numerous roof leaks.

**Item # 3**

**ITEM/PROJECT DESCRIPTION:**

-----CONTINUED-----

**Hawley Elementary School**

This is a three year project proposed to renovate and improve the HVAC systems at Hawley Elementary School.

Design Fees - Proposed fees required to design and prepare bid documents.

First Year of Construction - Install new hot water system, new temperature controls including head-end equipment, new electrical service (208 volt; 3 phase), new gas service, site work, ceilings would remain open requiring installation of temporary light fixtures, fire alarm devices, etc.

Second Year of construction - Install dedicated outside air ventilation systems including equipment, ductwork, piping, electrical power and controls. Install ceilings, permanent light fixtures, fire alarm devices and other ceiling mounted devices. Create conditioned space at attic of 1921 section of the building for new equipment.

Third Year of Construction - Install "ductless split" VRF type units including combined condensing units outside and refrigerant piping. Provide electrical power to equipment.

**PURPOSE & JUSTIFICATION:**

-----CONTINUED-----

**Hawley Elementary School**

The purpose of this project is to comply with current building code requirements for fresh air exchange and ventilation in classrooms and to replace aging equipment which exceeds its useful life.

Built in three sections, 1921, 1948 and 1997, this facility is currently heated by two boiler plants. The 1921 section is served by two steam boiler and the 1997 section is served by one hot water boiler which is located in the 1948 boiler room. The 1948 section has old cast iron radiators, while the 1921 section has been largely upgraded to fin-tube heaters. Problems with poor temperature control capabilities and long system-response time for temperature regulation create many rooms that are either too cold or too hot during the winter season. The steam boilers in the 1921 section are relatively new (1993), but the 1948 section is operating with the original equipment and is coming to the end of its useful life. The hot water boiler was installed in 1997. Mechanical ventilation exists in all rooms, but requires windows to be opened to provide "make-up" or fresh air. This is a particular problem in the 1921 portion, where road noise and auto/truck emissions are introduced to the classrooms when windows are opened. The 1997 section has some air-conditioned spaces, but the addition has six classrooms that are not air-conditioned. The computer room, nurse's room, library, gym and office are air-conditioned.

Item # 5**

**ITEM/PROJECT DESCRIPTION:**

-----CONTINUED-----

Sandy Hook Elementary School

Sandy Hook elementary school was constructed in 1956, with a small addition in 1964 and a second addition in 1993. It has a unique underground air tunnel for return air and piping. The ventilation air handler (according to the August 12, 2003 Newtown Public Schools Climate Control Committee Report) was coming to the end of its useful life will have 10 more years of use before replacement. The boilers are relatively new, 1993 installation, and are hot water systems throughout the building. Mechanical ventilation exists in the building mostly in the form of exhaust air only with natural ventilation through windows for intake air. In the 1956 and 1964 sections, during the heating season, some ventilation air is inducted via the air intakes. In the 1993 section all ventilation is via windows. Air conditioning is currently serving the administration offices, nurse's room and faculty lounge, but has been expanded beyond its ability to provide satisfactory service to all areas.

**PURPOSE & JUSTIFICATION:**

-----CONTINUED-----

Sandy Hook Elementary School

The proposed plan would:

Replace air handler to maintain the integrity of the system

Reroute the air intake

Replace identified exhaust fans and rooftop A/C with a small upgrade for improved cooling in the nurse's room  
Includes cleaning ductwork, reconfigure the return air system in the 1956/1964 sections of the school

Upgrade the air handler to a constant volume unit

Provide hot water fin-tube heaters in the 1956/1964 sections

Add air conditioning to the media center and adjacent offices as well as upgrade the A/C in the administration/nurse's room/faculty lounge areas for better individual temperature control

Middle Gate Elementary School

The improvement plan recommends:

- Replace existing exhaust fans serving the cafeteria, gym and adjacent toilets
- Installation of air conditioning in the media center and computer lab
- Temperature regulating controls throughout the building
- Replace two existing boilers with energy efficient units

**PURPOSE & JUSTIFICATION:**

-----CONTINUED-----

Middle Gate Elementary School

This school was built in two sections, 1964 and 1993. The current heating system is in good working order, a hot water system with fin-tube in the classrooms. All rooms have exhaust ventilation, but rely on windows for fresh intake air. Existing exhaust fans are in need of replacement, particularly in the cafeteria and gymnasium. The hot water loop system (as mentioned) is not recommended for upgrade, but the boiler plant from 1964 requires replacement of the two existing boilers.

Newtown Middle School Renovation and Expansion - First phase provides funds for design and engineering

The improvement plan is presented over a three year period at a total estimated cost of \$42,124,808 which includes:

- Replacing an existing steam heating system with an energy efficient hot water system to provide uniform heat in the facility.
- Install energy efficient direct digital control (DDC) temperature control systems. DDC system also aids in reducing maintenance.
- Replace rooftop air conditioners with more energy efficient units.

Improve classroom facility currently identified as 'D' wing consisting of 26 occupied student classrooms and the technology storage for the school system.

Improve the media center to provide a 21st Century learning center for students.

Expand the existing servery in the cafeteria.

Continue the improvement to the auditorium by replacing the existing sound system, front stage lighting and acoustics in the seating area.

**PURPOSE & JUSTIFICATION:**

-----CONTINUED-----

Newtown Middle School

The Middle School, which was opened in 1952, is a complex and complicated series of buildings including additions in 1954, 1958, 1970, 1987 and 2000. Four steam boilers provide all heating for the entire complex with a combination of steam piping distribution and hot water distribution (through the use of steam to hot water heat exchangers). The long steam runs to area B and C cause rooms at the farthest distance from the boiler plant to have the most difficulty in maintaining temperature control.

Ventilation equipment is old and at the end of its useful life. Air handling equipment needs to be replaced. Ventilation is being provided through natural ventilation supplemented by some mechanical ventilation. The existing mechanical system is exhaust only, no makeup air is provided. Ventilation rates per code for a mechanical ventilation system are not being met.

Three existing A/C roof top units were installed in 1986 to provide A/C to the library/media center, computer labs administration office areas and 'E' wing (formerly the administrative offices) consisting of four standard classrooms.

Renovation and expansion at the Middle School would include recommendations to improve the media center, enlarge the servery in the cafeteria and improve classroom space currently occupying 'D' wing modifying the need to construct a new auditorium on the school site.

This is a three year project proposed to renovate and improve the HVAC systems at Hawley Elementary School.

Design Fees - Proposed fees required to design and prepare bid documents

First Year of Construction - Install new hot water system, new temperature controls including head-end equipment, new electrical service (208 volt, 3 phase), new gas service, site work, ceilings would remain open requiring installation of temporary light fixtures, fire alarm devices, etc.

Second Year of construction - Install dedicated outside air ventilation systems including equipment, ductwork, piping, electrical power and controls. Install ceilings, permanent light fixtures, fire alarm devices and other ceiling mounted devices. Create conditioned space at attic of 1921 section of the building for new equipment.

Third Year of Construction - Install "ductless split" VRF type units including combined condensing units outside and refrigerant piping. Provide electrical power to equipment.

**PURPOSE & JUSTIFICATION:**

-----CONTINUED-----

Hawley Elementary School

The purpose of this project is to comply with current building code requirements for fresh air exchange and ventilation in classrooms and to replace aging equipment which exceeds its useful life.

Built in three sections, 1921, 1948 and 1997, this facility is currently heated by two boiler plants. The 1921 section is served by two steam boiler and the 1997 section is served by one hot water boiler which is located in the 1948 boiler room. The 1948 section has old cast iron radiators, while the 1921 section has been largely upgraded to fin-tube heaters. Problems with poor temperature control capabilities and long system-response time for temperature regulation create many rooms that are either too cold or too hot during the winter season. The steam boilers in the 1921 section are relatively new (1993), but the 1948 section is operating with the original equipment and is coming to the end of its useful life. The hot water boiler was installed in 1997. Mechanical ventilation exists in all rooms, but requires windows to be opened to provide "make-up" or fresh air. This is a particular problem in the 1921 portion, where road noise and auto/truck emissions are introduced to the classrooms when windows are opened. The 1997 section has some air-conditioned spaces, but the addition has six classrooms that are not air-conditioned. The computer room, nurse's room, library, gym and office are air-conditioned.

<b>DEPARTMENT:</b>	Board of Education	<b>PROJECT TITLE:</b>	Hawley Air Conditioning Systems																
<b>PRIORITY:</b>	HIGH	<b>LOCATION:</b>	Hawley Elementary School																
<b>ITEM/PROJECT DESCRIPTION:</b> Hawley Elem - Variable Refrigerant Flow (VRF) Air Condition Systems to provide adequate cooling of the building. The priority section of the building for cooling is the 1921 section located on Church Hill Road. During warm late spring and late summer months, air conditioning is necessary to reduce noise levels in these classrooms.																			
<b>PROJECT FISCAL YEAR START:</b>	2013 - 2014	<b>MONTHS TO COMPLETE:</b>	7 to 9 months																
			<b>USEFUL LIFE:</b> 21 to 25 years																
<b>PURPOSE &amp; JUSTIFICATION:</b> To comply with current building code requirements for proper ventilation for fresh air and to maintain comfort and noise levels in classrooms during cooling season. This type of proposed air conditioning system allows the administration to determine the number of classrooms to be air conditioned based on the approved project allowance. This is the final phase of the proposed three year HVAC project.
