Part II: Site Description

Indicate which of the following information has been provided (on a plan, in narrative description or calculations) to clearly, completely and accurately describe existing site conditions.

Identifying Number/Letter (of plan, narrative or calculations)

or calculations)	
	Natural Features:
SD-1	Soils
	Vegetation
SD-1	Topography
- T	Open water bodies (including ponds and lakes)
	Flowing water bodies (including streams and rivers)
	Public and private surface water and ground water supplies on or within 100 feet of site
SD-1	Maximum annual ground water elevations with dates and location of test
Sd-1	Boundaries of resource areas checked under Part I, item 11 above
	Other
	Man-made Features:
SD-1	Structures (such as buildings, piers, towers and headwalls)
	Drainage and flood control facilities at the site and immediately off the site, including
	culverts and open channels (with inverts), dams and dikes
SD-1	Subsurface sewage disposal systems
Sd-1	Underground utilities
	Roadways and parking areas
Sd-1	Property boundaries, easements and rights-of-way
	Other

Part III: Work Description

Indicate which of the following information has been provided (on a plan, in narrative description or calculations) to clearly, completely and accurately describe work proposed within each of the resource areas checked in Part I, item 11 above.

Identifying Number/Letter (of plan, narrative or calculations)	· ·
,	Planview and Cross Section of:
Sd-1	Structures (such as buildings, piers, towers and headwalls)
Sd-1	Drainage and flood control facilities, including culverts and open channels (with inverts), dams and dikes
Sd-1	Subsurface sewage disposal systems & underground utilities
	Filling, dredging and excavating, indicating volume and composition of material Compensatory storage areas, where required in accordance with Part III, Section 10:57
	(4) of the regulations
	Wildlife habitat restoration or replication areas
	Other
	Point Source Discharge
	Description of characteristics of discharge from point source (both closed and open
55	channel), when point of discharge falls within resource area checked under Part I, item 11 above, as supported by standard engineering calculations, data and plans, including
	11 above, as supported by standard engineering calculations, data and plans, including

but not limited to the following:

- 1. Delineation of the drainage area contributing to the point of discharge:
- 2. Pre- and post-development peak run-off from the drainage area, at the point of discharge, for at least the 10-year and 100-year frequency storm:
- 3. Pre- and post-development rate of infiltration contributing to the resource area checked under Part I, item
 11 above:
- 4. Estimated water quality characteristics of pre- and post-development run-off at the point of discharge.

Part IV: Mitigating Measures

- 1. Clearly, completely and accurately describe, with reference to supporting plans and calculations where necessary:
 - (a) All measures and designs proposed to meet the performance standards set forth under each resource area specified in Part II or Part III of the regulations; or
 - (b) why the presumptions set forth under each resource area specified in Part II or Part III of the regulations do not apply.

- 2. Clearly, completely and accurately describe, with reference to supporting plans and calculations where necessary:
 - (a) all measures and designs to regulate work within the Buffer Zone so as to ensure that said work does not alter an area specified in Part I, Section 10.02(1) (a) of these regulations; or
 - (b) if work in the Buffer Zone will alter such an area, all measures and designs proposed to meet the performance standards established for the adjacent resource area specified in Part II or Part III of these regulations.

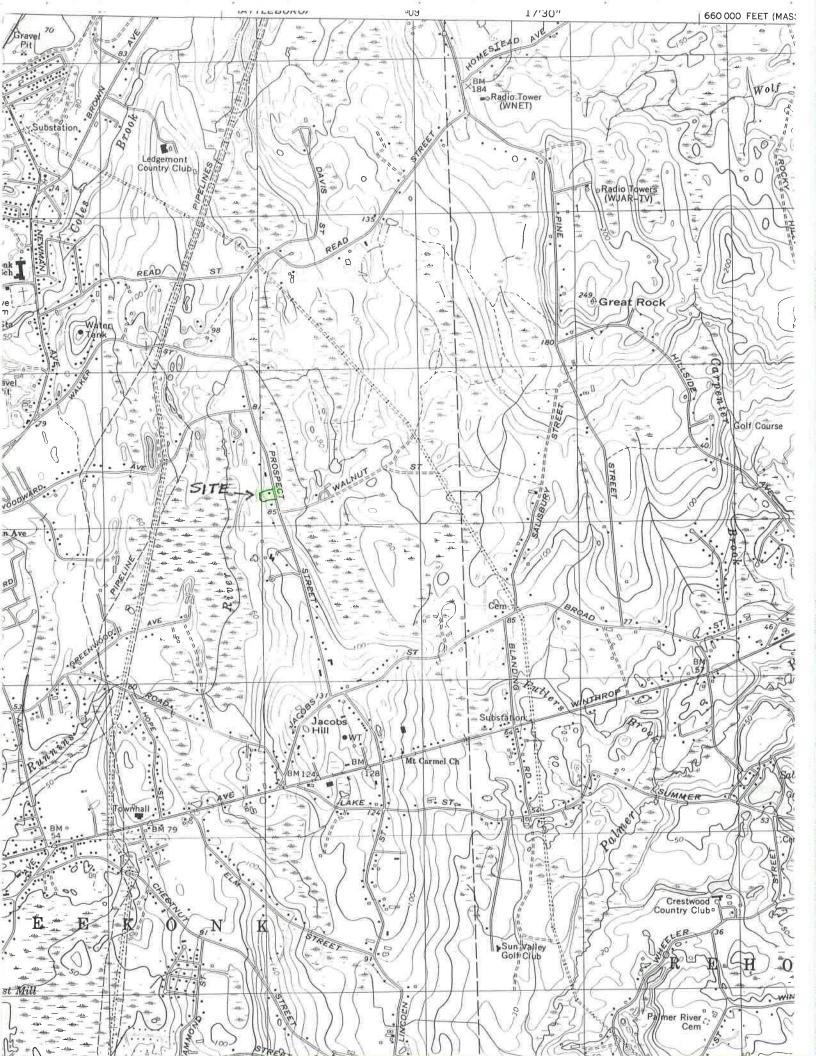

Coastal Resource Area Type Bordered By 100-Foot Discretionary Zone: **Inland** Bordering Vegetated Wetland (wet woodland)	laentifying number or letter of support documents
Previously existing cellar drains and yard drain were re-routed around site of replacement septic system leaching area discharging in the same area as before. Excess soil from leaching system excavation was piled in the Buffer Zone with the idea in mind of spreding the excess soil materials throughout the rear yard, some within the Buffer Zone. Once final grade has been established with a top dressing of about 6 inches of loam, The entire area will be planted with grass or other ground cover to control siltation of the adjacent BVW on neighboring property.
